

(a) Six 8D stimulus sets

- $\nu = 0.5$ ($\alpha_\infty = 1.125$)
- $\nu = 0.75$ ($\alpha_\infty = 1.1875$)
- $\nu = 1$ ($\alpha_\infty = 1.25$)
- $\nu = 1.5$ ($\alpha_\infty = 1.375$)
- $\nu = 2.5$ ($\alpha_\infty = 1.625$)
- bound $1 + 2/d = 1.25$

(b) Four 4D stimulus sets

- $\nu = 0.5$ ($\alpha_\infty = 1.25$)
- $\nu = 0.75$ ($\alpha_\infty = 1.375$)
- $\nu = 1$ ($\alpha_\infty = 1.5$)
- $\nu = 1.5$ ($\alpha_\infty = 1.75$)
- $\nu = 2.5$ ($\alpha_\infty = 2.25$)
- bound $1 + 2/d = 1.5$
